

Project Orange

Name: The TAB (Orange TAB)

Problem: Many times at a restaurant, particularly chinese/korean/japanese ones when we eat with friends, we may want to split the bill. However, sometimes, this makes it hard to do as the restaurant may only hand one bill. With the app, you can pay separately. If you forget your money, you can pay with the app. You can also schedule dinner times, or split dinner bills accordingly thru the tab (If one person eats alot, and someone eats only alittle, it can be calculated through the app). Gain rewards based on use of the app. Able to use rewards and such...

Abstract: Propose a TAB restaraunt menu. It allows you to “open” a tab with a restaurant. You can order specifically from the app, payments will be linked to your credit card (so you may not need to actually have money and just walk into the store to eat)
Also rewards, such as

Features: Rewards (Stamp cards) ← image processing

Bill Splitting

Menu Helper ← image processing stuff (Ill explain this one when we meet, kinda hard to explain)

Need more ideas...
